

OCTOBER IS CYBER SECURITY

AWARENESS MONTH

01

PROTECT YOUR PASSWORD

A long password that is memorized, never reused, and never shared with anyone is a strong password.

Try using a passphrase that combines numbers and symbols.

02

BE A SAFE SURFER

Visit trusted sites, and be wary of pop-up ads warning you to "CLICK NOW!" or download software.

These links may infect your computer with viruses or malware and impact the entire GNWT network.

03

STOP.THINK.CONNECT.

STOP and check. Is the website you are using protected? (<https://> and 'lock' symbols)

THINK about what you are doing or sharing over the internet.

CONNECT!
